

Nonlinear Model Predictive Control: Theory and Algorithms (Communications and Control Engineering)

By Lars Grüne, Jürgen Pannek

Nonlinear Model Predictive Control: Theory and Algorithms (**Communications and Control Engineering**) By Lars Grüne, Jürgen Pannek

Nonlinear Model Predictive Control is a thorough and rigorous introduction to nonlinear model predictive control (NMPC) for discrete-time and sampled-data systems. NMPC is interpreted as an approximation of infinite-horizon optimal control so that important properties like closed-loop stability, inverse optimality and suboptimality can be derived in a uniform manner. These results are complemented by discussions of feasibility and robustness. NMPC schemes with and without stabilizing terminal constraints are detailed and intuitive examples illustrate the performance of different NMPC variants. An introduction to nonlinear optimal control algorithms gives insight into how the nonlinear optimisation routine – the core of any NMPC controller – works. An appendix covering NMPC software and accompanying software in MATLAB® and C++(downloadable from www.springer.com/ISBN) enables readers to perform computer experiments exploring the possibilities and limitations of NMPC.

Editorial Review

Review

"The book provides an excellent and extensive treatment of NMPC from a careful introduction to the underlying theory to advanced results. It can be used for independent reading by applied mathematicians, control theoreticians and engineers who desire a rigorous introduction into the NMPC theory. It can also be used as a textbook for a graduate-level university course in NMPC." (Ilya Kolmanovsky, Mathematical Reviews, April, 2015)

"In the monograph nonlinear, discrete-time, finite-dimensional control systems with constant parameters are considered. ... Each chapter of the monograph contains many numerical examples which illustrate the theoretical considerations, several possible extensions and open problems. Moreover, relationships to results on predictive control published in the literature are pointed out." (Jerzy Klamka, Zentralblatt MATH, Vol. 1220, 2011)

From the Back Cover

Nonlinear model predictive control (NMPC) is widely used in the process and chemical industries and increasingly for applications, such as those in the automotive industry, which use higher data sampling rates.

Nonlinear Model Predictive Control is a thorough and rigorous introduction to NMPC for discrete-time and sampled-data systems. NMPC is interpreted as an approximation of infinite-horizon optimal control so that important properties like closed-loop stability, inverse optimality and suboptimality can be derived in a uniform manner. These results are complemented by discussions of feasibility and robustness. NMPC schemes with and without stabilizing terminal constraints are detailed and intuitive examples illustrate the performance of different NMPC variants. An introduction to nonlinear optimal control algorithms gives insight into how the nonlinear optimisation routine – the core of any NMPC controller – works. An appendix covering NMPC software and accompanying software in MATLAB® and C++(downloadable from http://www.nmpc-book.com/) enables readers to perform computer experiments exploring the possibilities and limitations of NMPC.

Nonlinear Model Predictive Control is primarily aimed at academic researchers and practitioners working in control and optimisation but the text is self-contained featuring background material on infinite-horizon optimal control and Lyapunov stability theory which makes the book accessible to graduate students of control engineering and applied mathematics..

About the Author

Lars Grüne has been Professor for Applied Mathematics at the University of Bayreuth, Germany, since 2002 and head of the Chair of Applied Mathematics since 2009. He received his Diploma and Ph.D. in Mathematics in 1994 and 1996, respectively, from the University of Augsburg and his habilitation from the J.W. Goethe University in Frankfurt/M in 2001. He held visiting positions at the Universities of Rome 'La Sapienza' (Italy), Padova (Italy), Melbourne (Australia), Paris IX ? Dauphine (France) and Newcastle (Australia). Professor Grüne is Editor-in-Chief of the journal Mathematics of Control, Signals and Systems (MCSS), Associate Editor for the Journal of Optimization Theory and Applications (JOTA) and the Journal of Applied Mathematica and Mechanics (ZAMM) and member of the Managing Board of the GAMM ?

International Association of Applied Mathematics and Mechanics. Professor Grüne co-authored four books, more than 100 papers and chapters in peer reviewed journals and books and more than 80 articles in conference proceedings. He is member of the steering committee of the International Symposium on Mathematical Theory of Networks and Systems (MTNS) and member of the Program Comittees of various other conferences, including IFAC-NOLCOS symposia, the European Control Conference and the IEEE Conference on Decision and Control. In 2012, Professor Grüne was awarded the Excellence in Teaching Award ("Preis für gute Lehre") from the State of Bavaria. His research interests lie in the area of mathematical systems and control theory with a focus on numerical and optimization-based methods for stability analysis and stabilization of nonlinear systems.

Jürgen Pannek has been Professor in the Department of Production Engineering at the University of Bremen (Germany) since 2014. He received his Diploma in Mathematical Economics and his Ph.D. in Mathematics from the University of Bayreuth in 2005 and 2009. He was visiting lecturer at the University of Birmingham (England) in 2008 and Curtin University of Perth (Australia) from 2010 to 2011. Thereafter, he worked as scientific assistant in the Department of Aerospace Engineering at the University of the Federal Armed Forces Munich (Germany). In his research, he focuses on the area of system and control theory from the application point of view regarding robotics, logistics and cyberphysical systems.

Users Review

From reader reviews:

Ian Gardner:

This Nonlinear Model Predictive Control: Theory and Algorithms (Communications and Control Engineering) book is simply not ordinary book, you have it then the world is in your hands. The benefit you will get by reading this book is definitely information inside this guide incredible fresh, you will get information which is getting deeper anyone read a lot of information you will get. That Nonlinear Model Predictive Control: Theory and Algorithms (Communications and Control Engineering) without we understand teach the one who reading it become critical in considering and analyzing. Don't be worry Nonlinear Model Predictive Control: Theory and Algorithms (Communications and Control Engineering) can bring whenever you are and not make your case space or bookshelves' become full because you can have it in the lovely laptop even phone. This Nonlinear Model Predictive Control: Theory and Algorithms (Communications and Control Engineering) having excellent arrangement in word and also layout, so you will not really feel uninterested in reading.

David Sweet:

A lot of people always spent all their free time to vacation or even go to the outside with them household or their friend. Were you aware? Many a lot of people spent these people free time just watching TV, or perhaps playing video games all day long. If you want to try to find a new activity that is look different you can read any book. It is really fun to suit your needs. If you enjoy the book you read you can spent the whole day to reading a guide. The book Nonlinear Model Predictive Control: Theory and Algorithms (Communications and Control Engineering) it doesn't matter what good to read. There are a lot of folks that recommended this book. These people were enjoying reading this book. In the event you did not have enough space to develop this book you can buy the particular e-book. You can m0ore simply to read this

book through your smart phone. The price is not too expensive but this book has high quality.

Gerardo Whittaker:

You may get this Nonlinear Model Predictive Control: Theory and Algorithms (Communications and Control Engineering) by look at the bookstore or Mall. Merely viewing or reviewing it could to be your solve problem if you get difficulties for ones knowledge. Kinds of this guide are various. Not only by means of written or printed but additionally can you enjoy this book through e-book. In the modern era such as now, you just looking because of your mobile phone and searching what their problem. Right now, choose your own personal ways to get more information about your e-book. It is most important to arrange you to ultimately make your knowledge are still revise. Let's try to choose proper ways for you.

Janice Martin:

Reading a e-book make you to get more knowledge from the jawhorse. You can take knowledge and information originating from a book. Book is created or printed or outlined from each source in which filled update of news. With this modern era like today, many ways to get information are available for you. From media social such as newspaper, magazines, science e-book, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Are you ready to spend your spare time to open your book? Or just trying to find the Nonlinear Model Predictive Control: Theory and Algorithms (Communications and Control Engineering) when you needed it?
