Deep Marine Systems: Processes, Deposits, Environments, Tectonics and Sedimentation (Wiley Works) By Kevin T. Pickering, Richard N. Hiscott

Deep-water (below wave base) processes, although generally hidden from view, shape the sedimentary record of more than 65% of the Earth's surface, including large parts of ancient mountain belts. This book aims to inform advanced-level undergraduate and postgraduate students, and professional Earth scientists with interests in physical oceanography and hydrocarbon exploration and production, about many of the important physical aspects of deep-water (mainly deep-marine) systems. The authors consider transport and deposition in the deep sea, trace-fossil assemblages, and facies stacking patterns as an archive of the underlying controls on deposit architecture (e.g., seismicity, climate change, autocyclicality). Topics include modern and ancient deep-water sedimentary environments, tectonic settings, and how basinal and extra-basinal processes generate the typical characteristics of basin slopes, submarine canyons, contourite mounds and drifts, submarine fans, basin floors and abyssal plains.

Editorial Review

From the Back Cover

Deep-water (below wave base) processes, although generally hidden from view, shape the sedimentary record of more than 65% of the Earth's surface, including large parts of ancient mountain belts. This book aims to inform advanced-level undergraduate and postgraduate students, and professional Earth scientists with interests in physical oceanography and hydrocarbon exploration and production, about many of the important physical aspects of deep-water (mainly deep-marine) systems. The authors consider transport and deposition in the deep sea, trace-fossil assemblages, and facies stacking patterns as an archive of the underlying controls on deposit architecture (e.g., seismicity, climate change, autocyclicality). Topics include modern and ancient deep-water sedimentary environments, tectonic settings, and how basinal and extra-basinal processes generate the typical characteristics of basin slopes, submarine canyons, contourite mounds and drifts, submarine fans, basin floors and abyssal plains.

About the Author

Kevin T. Pickering is Professor of Sedimentology & Stratigraphy in the Department of Earth Sciences at University College London, U.K. He has published ~140 peer-reviewed papers, co-authored 6 books and edited 3 books on aspects of deep-water sediments and global environmental issues. He managed the industry-sponsored Ainsa Project, an integrated outcrop-subsurface drilling project to understand deep-marine channels in the Spanish Pyrenees, and has sailed on four international scientific drilling expeditions (DSDP, ODP, IODP). In 2010, in recognition of his research, Pickering was elected as a Fellow of the Geological Society of America.

Richard N. Hiscott is an Emeritus Professor at Memorial University of Newfoundland, Canada. His 40 years of process-oriented research covers ancient deep-sea to alluvial facies of Proterozoic to Cretaceous age, four Ocean Drilling Program campaigns including Amazon submarine fan, Quaternary sedimentology of the Labrador Sea, Santa Monica Basin, and the Black Sea region including dynamics of the saline gravity current that enters the low-salinity Black Sea through the Bosphorus Strait.

Users Review

From reader reviews:

Kara Corbett:

Do you one among people who can't read pleasurable if the sentence chained in the straightway, hold on guys this aren't like that. This Deep Marine Systems: Processes, Deposits, Environments, Tectonics and Sedimentation (Wiley Works) book is readable by means of you who hate those straight word style. You will find the details here are arrange for enjoyable reading experience without leaving possibly decrease the knowledge that want to offer to you. The writer associated with Deep Marine Systems: Processes, Deposits, Environments, Tectonics and Sedimentation (Wiley Works) content conveys the thought easily to understand by lots of people. The printed and e-book are not different in the articles but it just different by means of it. So , do you nonetheless thinking Deep Marine Systems: Processes, Deposits, Environments, Tectonics and Sedimentation (Wiley Works) is not loveable to be your top record reading book?

Nikki Jones:

The book *Deep Marine Systems: Processes, Deposits, Environments, Tectonics and Sedimentation* (Wiley Works) will bring that you the new experience of reading a new book. The author style to explain the idea is very unique. In the event you try to find new book to learn, this book very ideal to you. The book *Deep Marine Systems: Processes, Deposits, Environments, Tectonics and Sedimentation* (Wiley Works) is much recommended to you to learn. You can also get the e-book from the official web site, so you can more easily to read the book.

Beth Ritchey:

Can you one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Try to pick one book that you just dont know the inside because don't assess book by its deal with may doesn't work the following is difficult job because you are frightened that the inside maybe not while fantastic as in the outside look likes. Maybe you answer might be *Deep Marine Systems: Processes, Deposits, Environments, Tectonics and Sedimentation* (Wiley Works) why because the amazing cover that make you consider regarding the content will not disappoint a person. The inside or content is usually fantastic as the outside or maybe cover. Your reading 6th sense will directly assist you to pick up this book.

Bradley Harshbarger:

This *Deep Marine Systems: Processes, Deposits, Environments, Tectonics and Sedimentation* (Wiley Works) is new way for you who has attention to look for some information as it relief your hunger of information. Getting deeper you on it getting knowledge more you know or you who still having bit of digest in reading this *Deep Marine Systems: Processes, Deposits, Environments, Tectonics and Sedimentation* (Wiley Works) can be the light food for you because the information inside this particular book is easy to get by means of anyone. These books build itself in the form which can be reachable by anyone, sure I mean in the e-book application form. People who think that in publication form make them feel drowsy even dizzy this e-book is the answer. So there is not any in reading a reserve especially this one. You can find actually looking for. It should be here for you. So , don't miss it! Just read this e-book variety for your better life as well as knowledge.
