## Foundations and Applications of Statistics: An Introduction Using R (Pure and Applied Undergraduate Texts) By Randall Pruim

Foundations and Applications of Statistics simultaneously emphasizes both the foundational and the computational aspects of modern statistics. Engaging and accessible, this book is useful to undergraduate students with a wide range of backgrounds and career goals. The exposition immediately begins with statistics, presenting concepts and results from probability along the way. Hypothesis testing is introduced very early, and the motivation for several probability distributions comes from p-value computations. Pruim develops the students' practical statistical reasoning through explicit examples and through numerical and graphical summaries of data that allow intuitive inferences before introducing the formal machinery. The topics have been selected to reflect the current practice in statistics, where computation is an indispensable tool. In this vein, the statistical computing environment  $\text{\code{R}}$  is used throughout the text and is integral to the exposition. Attention is paid to developing students' mathematical and computational skills as well as their statistical reasoning. Linear models, such as regression and ANOVA, are treated with explicit reference to the underlying linear algebra, which is motivated geometrically. Foundations and Applications of Statistics discusses both the mathematical theory underlying statistics and practical applications that make it a powerful tool across disciplines. The book contains ample material for a two-semester course in undergraduate probability and statistics. A one-semester course based on the book will cover hypothesis testing and confidence intervals for the most common situations.

### **Editorial Review**

#### **Users Review**

##### **From reader reviews:**

###### **Joyce Volz:**

Do you have favorite book? In case you have, what is your favorite's book? Book is very important thing for us to find out everything in the world. Each publication has different aim as well as goal; it means that book has different type. Some people experience enjoy to spend their time and energy to read a book. They are really reading whatever they take because their hobby is definitely reading a book. How about the person who don't like looking at a book? Sometime, particular person feel need book after they found difficult problem or perhaps exercise. Well, probably you will require this Foundations and Applications of Statistics: An Introduction Using R (Pure and Applied Undergraduate Texts).

###### **Donald Worsley:**

Nowadays reading books become more and more than want or need but also work as a life style. This reading behavior give you lot of advantages. The huge benefits you got of course the knowledge the rest of the information inside the book which improve your knowledge and information. The data you get based on what kind of guide you read, if you want get more knowledge just go with training books but if you want sense happy read one using theme for entertaining for example comic or novel. Often the Foundations and Applications of Statistics: An Introduction Using R (Pure and Applied Undergraduate Texts) is kind of book which is giving the reader unpredictable experience.

###### **Bobby Gonsalves:**

People live in this new moment of lifestyle always make an effort to and must have the time or they will get lots of stress from both lifestyle and work. So , whenever we ask do people have spare time, we will say absolutely yes. People is human not only a robot. Then we request again, what kind of activity are there when the spare time coming to you of course your answer can unlimited right. Then do you ever try this one, reading books. It can be your alternative with spending your spare time, the book you have read will be Foundations and Applications of Statistics: An Introduction Using R (Pure and Applied Undergraduate Texts).

###### **Joseph Mattos:**

In this age globalization it is important to someone to obtain information. The information will make someone to understand the condition of the world. The fitness of the world makes the information simpler to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You

can view that now, a lot of publisher in which print many kinds of book. The particular book that recommended to you personally is Foundations and Applications of Statistics: An Introduction Using R (Pure and Applied Undergraduate Texts) this publication consist a lot of the information on the condition of this world now. That book was represented how does the world has grown up. The language styles that writer value to explain it is easy to understand. The particular writer made some investigation when he makes this book. This is why this book acceptable all of you.
