Our Grandchildren Redesigned: Life in the Bioengineered Society of the Near Future By Michael Bess

A panoramic overview of biotechnologies that can endlessly boost human capabilities and the drastic changes these “superhuman” traits could trigger

Biotechnology is moving fast. In the coming decades, advanced pharmaceuticals, bioelectronics, and genetic interventions will be used not only to heal the sick but to boost human physical and mental performance to unprecedented levels. People will have access to pills that make them stronger and faster, informatic devices will interface seamlessly with the human brain, and epigenetic modification may allow people to reshape their own physical and mental identities at will.

Until recently, such major technological watersheds—like the development of metal tools or the industrialization of manufacturing—came about incrementally over centuries or longer. People and social systems had time to adapt: they gradually developed new values, norms, and habits to accommodate the transformed material conditions. But contemporary society is dangerously unprepared for the dramatic changes it is about to experience down this road on which it is already advancing at an accelerating pace.

The results will no doubt be mixed. People will live longer, healthier lives, will fine-tune their own thought processes, and will generate staggeringly complex and subtle forms of knowledge and insight. But these technologies also threaten to widen the rift between rich and poor, to generate new forms of social and economic division, and to force people to engage in constant cycles of upgrades and boosts merely to keep up. Individuals who boost their traits beyond a certain threshold may acquire such extreme capabilities that they will no longer be recognized as unambiguously human.

In this important and timely book, prize-winning historian Michael Bess provides a clear, nontechnical overview of cutting-edge biotechnology and paints a vivid portrait of a near-future society in which bioenhancement has become a part of everyday life. He surveys the ethical questions raised by the enhancement enterprise and explores the space for human agency in dealing with the challenges that these technologies will present.

Headed your way over the coming decades: new biotechnologies that can powerfully alter your body and mind.

The possibilities are tantalizing:

- Rejuvenation therapies offering much longer lives (160 and even beyond) in full vigor and mental acuity
- Cognitive enhancement through chemical or bioelectronic means (the rough equivalent of doubling or tripling IQ scores)
- Epigenetic tools for altering some of your genetically influenced traits at any point in your lifetime (body shape, athletic ability, intelligence, personality)
- Bioelectronic devices for modulating your own brain processes, including your “pleasure centers” (a potentially non-stop high)
- Direct control of machines by thought, and perhaps direct communication with other people, brain-to-brain (a new dimension of sharing and intimacy)

But some of the potential consequences are also alarming:

- A growing rift between the biologically enhanced and those who can’t afford such modifications
- A constant cycle of upgrades and boosts as the bar of “normal” rises ever higher—“*Humans 95, Humans XP, Humans 8*”
- The fragmentation of humankind into rival “bioenhancement clusters”
- A gradually blurring boundary between “person” and “product”
- Extreme forms of self-modification, with some individuals no longer recognized as unambiguously human

From the Hardcover edition.

Editorial Review

Review

“In the future, accelerating technology and unexpected, revolutionary events—most of which will never be predicted by futurists—may produce a society as alien as some of our tools. Bess delivers an insightful philosophical analysis of how we must adjust.”

—*Kirkus Reviews*

“Rejuvenation therapies that could potentially extend human lifespans to 160 years or more, chemical or bioelectronic cognitive enhancement that could double or triple IQ scores, bioelectronic devices for modulating brain processes including ‘pleasure centers,’ so-called ‘designer babies,’ and much more are poised to cross the threshold from science fiction to reality in the near future. Michael Bess offers a sober prediction of how such advances will directly affect human society, and the ethical dilemmas that could result. *Our Grandchildren Redesigned* is fascinating from cover to cover and near-impossible to put down. Highly recommended!”

—*The Midwest Book Review*

From the Hardcover edition.

About the Author

Michael Bess is the Chancellor’s Professor of History at Vanderbilt University. He has received major fellowships from the J. S. Guggenheim Foundation, the American Council of Learned Societies, the National Human Genome Research Institute, the John D. and Catherine T. MacArthur Foundation, and the Fulbright program. His previous books include *Choices Under Fire* and *The Light-Green Society*.

Users Review

From reader reviews:

Christi Ross:

Have you spare time for any day? What do you do when you have far more or little spare time? Sure, you can choose the suitable activity for spend your time. Any person spent their own spare time to take a go walking, shopping, or went to the particular Mall. How about open as well as read a book eligible *Our Grandchildren Redesigned: Life in the Bioengineered Society of the Near Future*? Maybe it is to be best activity for you. You know beside you can spend your time with the favorite's book, you can more intelligent than before. Do you agree with their opinion or you have some other opinion?

Walter Goodwin:

This *Our Grandchildren Redesigned: Life in the Bioengineered Society of the Near Future* is great publication for you because the content that is full of information for you who also always deal with world and get to make decision every minute. This specific book reveal it facts accurately using great coordinate word or we can say no rambling sentences inside it. So if you are read it hurriedly you can have whole data

in it. Doesn't mean it only provides you with straight forward sentences but difficult core information with attractive delivering sentences. Having Our Grandchildren Redesigned: Life in the Bioengineered Society of the Near Future in your hand like obtaining the world in your arm, data in it is not ridiculous just one. We can say that no e-book that offer you world with ten or fifteen minute right but this book already do that. So , this is certainly good reading book. Hey Mr. and Mrs. hectic do you still doubt that?

Jared Hoskins:

What is your hobby? Have you heard which question when you got college students? We believe that that problem was given by teacher on their students. Many kinds of hobby, All people has different hobby. And also you know that little person similar to reading or as reading through become their hobby. You need to understand that reading is very important and book as to be the factor. Book is important thing to increase you knowledge, except your personal teacher or lecturer. You find good news or update with regards to something by book. Many kinds of books that can you take to be your object. One of them is actually Our Grandchildren Redesigned: Life in the Bioengineered Society of the Near Future.

Iva Simmon:

A number of people said that they feel bored when they reading a e-book. They are directly felt it when they get a half elements of the book. You can choose the book Our Grandchildren Redesigned: Life in the Bioengineered Society of the Near Future to make your current reading is interesting. Your own skill of reading proficiency is developing when you like reading. Try to choose very simple book to make you enjoy to see it and mingle the opinion about book and examining especially. It is to be first opinion for you to like to open up a book and go through it. Beside that the book Our Grandchildren Redesigned: Life in the Bioengineered Society of the Near Future can to be your brand-new friend when you're feel alone and confuse with the information must you're doing of this time.
