Current Developments in Biotechnology and Bioengineering: Production, Isolation and Purification of Industrial Products From Elsevier

Current Developments in Biotechnology and Bioengineering: Production, Isolation and Purification of Industrial Products provides extensive coverage of new developments, state-of-the-art technologies, and potential future trends, focusing on industrial biotechnology and bioengineering practices for the production of industrial products, such as enzymes, organic acids, biopolymers, and biosurfactants, and the processes for isolating and purifying them from a production medium.

During the last few years, the tools of molecular biology and genetic and metabolic engineering have rendered tremendous improvements in the production of industrial products by fermentation. Structured by industrial product classifications, this book provides an overview of the current practice, status, and future potential for the production of these agents, along with reviews of the industrial scenario relating to their production.

- Provides information on industrial bioprocesses for the production of microbial products by fermentation
- Includes separation and purification processes of fermentation products
- Presents economic and feasibility assessments of the various processes and their scaling up
- Links biotechnology and bioengineering for industrial process development

Editorial Review

About the Author

Professor Ashok Pandey is currently with the Center of Innovative and Applied Bioprocessing, Mohali, Punjab, India; he was the former Deputy Director for CSIR's National Institute for Interdisciplinary Science and Technology at Trivandrum, where he head the Centre for Biofuels and Biotechnology Division. Professor Pandey's research interests are on bio-based economy for the production of fuels and chemicals. He has over 1000 publications and communications, which include 14 patents and design copyright, 34 books, 99 book chapters, and 391 original and review papers. Professor Pandey is the recipient of many national and international awards and fellowships, including Fellow of International Society for Energy, Environment and Sustainability, National Academy of Science (India), Biotech Research Society, India, and the International Organization of Biotechnology and Bioengineering. He was Chairman of the International Society of Food, Agriculture and Environment, Finland (Food & Health) from 2003-2004. He is Founder President of the Biotech Research Society, India (www.brsi.in); International Coordinator and General Secretary of International Forum on Industrial Bioprocesses, France (www.ifibiop.org), and Vice-President of the International Society for Energy, Environment & Sustainability (www.isees.org) and All India Biotech Association (www.aibaonline.com). Professor Pandey is Editor-in-chief of Bioresource Technology, Honorary Executive Advisors of Journal of Water Sustainability and Journal of Energy and Environmental Sustainability and editorial board member of several international and Indian journals. Prof. Pandey was also recently honoured as the Most Cited Author as per the Shanghai Ranking's Global Ranking of Academic Subjects 2016

Dr Sangeeta Negi is Assistant Professor in the Department of Biotechnology at the Motilal Nehru National Institute of Technology, India. She has a first class Master's degree in Biochemistry and a PhD in Biotechnology from the Indian Institute of Technology, Kharagpur. She has also worked as an academic guest at the Biological Engineering Department; Polytech Clermont-Ferrand; Universite Baise Pascal, France; and at the Bioenergy and Energy Planning Research Group (BPE); Swiss Federal Institute of Technology, Lausanne (EPFL) Switzerland. Dr Negi's current research interests are in the area of biofuels, industrial enzymes, and bioremediation. She is an editorial board member of the Journal of Waste Conversion, Bioproducts and Biotechnology, and Journal of Environmental Science and Sustainability. She has been awarded as "Outstanding reviewer" by Elsevier and has won the Young Scientist Award by DST at the National Seminar on Biological and Alternative Energies Present and Future organized by Andhra University, Visakhapatnam in 2009. She has also won Best Poster Award at the International Congress on Bioprocesses in Food Industries (ICBF 2008) at Hyderabad. Dr Negi has contributed to nearly 50 publications, including review articles, original papers, and conference communications.

Prof Carlos Ricardo Soccol is the research group leader of DEBB (Department of Bioprocess Engineering and Biotechnology) at the Federal University of Paraná, Brazil, with twenty years of experience in biotechnological research and development of bioprocesses with industrial application. He is graduated in Chemical Engineering (UFPR, 1979), Master in Food Technology (UFPR, 1986) and Ph.D. in Genie Enzymatique, Microbiologie et Bioconversion (Université de Technologie de Compiègne,- France, 1992). Postdoctor at Institut ORSTOM/IRD (Montpellier, 1994 and 1997) and at the Université de Provence et de la Méditerranée (Marseille, 2000). He is HDR Professor at Ecole d'Ingénieurs Supérieure of Luminy, Marseille-France. He has experience in the areas of Science and Food Technology, with emphasis on Agro-industrial and Agroalimentary Biotechnology, acting in the following areas: bioprocess engineering and solid state fermentation, submerged fermentation, bioseparations, industrial bioprocesses, enzyme technology, tissue

culture, bio-industrial projects and bioproduction. He is currently Coordinator of Master BIODÉV-UNESCO, Associate Editor of five international journals and Editor in Chief of Brazilian Archives of Biology and Technology Journal. Professor Soccol received several national and international awards which include Science & Technology award of the Govt. of Paraná (1996), Scopus/Elsevier award (2009), Dr. Honoris Causa, University Blaise Pascal-France (2010), Outstanding Scientist - 5th International Conference on Industrial Bioprocesses, Taipei, Taiwan (2012), Elected Titular Member of the Brazilian Academy of Sciences (2014). He is a technical and scientific consultant of several companies, agencies and scientific journals in Brazil and abroad. He has supervised and formed 96 Master Science students, 48 PhD students and 14 Post-Doctorate Students. He has 995 publications/communications which include 17 books, 107 book chapters, 270 original research papers, 557 research communications in international and national conferences and has registered 44 patents. His research articles until the moment were cited (Scopus DataBase) 5600 Times with Index h=36.

Users Review

From reader reviews:

Ian Ashlock:

Have you spare time to get a day? What do you do when you have much more or little spare time? Sure, you can choose the suitable activity with regard to spend your time. Any person spent their own spare time to take a wander, shopping, or went to often the Mall. How about open or maybe read a book entitled Current Developments in Biotechnology and Bioengineering: Production, Isolation and Purification of Industrial Products? Maybe it is to be best activity for you. You understand beside you can spend your time using your favorite's book, you can better than before. Do you agree with its opinion or you have other opinion?

Jesus Reeves:

In this 21st centuries, people become competitive in every way. By being competitive at this point, people have do something to make these individuals survives, being in the middle of the crowded place and notice by simply surrounding. One thing that sometimes many people have underestimated that for a while is reading. Yes, by reading a book your ability to survive improve then having chance to stand than other is high. In your case who want to start reading some sort of book, we give you this particular Current Developments in Biotechnology and Bioengineering: Production, Isolation and Purification of Industrial Products book as beginning and daily reading e-book. Why, because this book is greater than just a book.

Florence Adams:

This Current Developments in Biotechnology and Bioengineering: Production, Isolation and Purification of Industrial Products is completely new way for you who has fascination to look for some information mainly because it relief your hunger info. Getting deeper you in it getting knowledge more you know otherwise you who still having small amount of digest in reading this Current Developments in Biotechnology and Bioengineering: Production, Isolation and Purification of Industrial Products can be the light food for you personally because the information inside this specific book is easy to get simply by anyone. These books develop itself in the form which can be reachable by anyone, yes I mean in the e-book contact form. People who think that in guide form make them feel tired even dizzy this book is the answer. So there is no in reading a publication especially this one. You can find what you are looking for. It should be here for an

individual. So , don't miss it! Just read this e-book sort for your better life and also knowledge.

Gerald Wright:

A lot of people said that they feel fed up when they reading a guide. They are directly felt this when they get a half regions of the book. You can choose the actual book Current Developments in Biotechnology and Bioengineering: Production, Isolation and Purification of Industrial Products to make your personal reading is interesting. Your own skill of reading proficiency is developing when you including reading. Try to choose simple book to make you enjoy to learn it and mingle the idea about book and reading especially. It is to be first opinion for you to like to open up a book and read it. Beside that the e-book Current Developments in Biotechnology and Bioengineering: Production, Isolation and Purification of Industrial Products can to be your new friend when you're feel alone and confuse with what must you're doing of that time.
