## **Dynamic Models of Infectious Diseases: Volume 1: Vector-Borne Diseases**

From Springer

Despite great advances in public health worldwide, insect vector-borne infectious diseases remain a leading cause of morbidity and mortality. Diseases that are transmitted by arthropods such as mosquitoes, sand flies, fleas, and ticks affect hundreds of millions of people and account for nearly three million deaths all over the world. In the past there was very little hope of controlling the epidemics caused by these diseases, but modern advancements in science and technology are providing a variety of ways in which these diseases can be handled. Clearly, the process of transmission of an infectious disease is a nonlinear (not necessarily linear) dynamic process which can be understood only by appropriately quantifying the vital parameters that govern these dynamics.

## **Editorial Review**

From the Back Cover

Despite great advances in public health worldwide, insect vector-borne infectious diseases remain a leading cause of morbidity and mortality. Diseases that are transmitted by arthropods such as mosquitoes, sand flies, fleas, and ticks affect hundreds of millions of people and account for nearly three million deaths all over the world. In the past there was very little hope of controlling the epidemics caused by these diseases, but modern advancements in science and technology are providing a variety of ways in which these diseases can be handled. Clearly, the process of transmission of an infectious disease is a nonlinear (not necessarily linear) dynamic process which can be understood only by appropriately quantifying the vital parameters that govern these dynamics.

The following aspects are associated with the modeling of the dynamics of infectious diseases:

- Disease transmission dynamics
- Predictive dynamics
- Control dynamics
- Relapse dynamics
- Transformation of experimental results from closed (laboratory) environment to open (real world) environment

*Dynamic Models of Infectious Diseases – Vector Borne Diseases*, presents a self-contained account of the dynamic modeling of diseases of vital importance transmitted by insect arthropods.

### **Key Features:**

- A thorough discussion on the design of effective disease control strategies
  - Presents a variety of predictive dynamical models for disease transmission
  - Provides an accessible and informative over view of known literature including several clinical practices
  - Exemplifies the role of information technology as a problem solver aiding effective early diagnosis and disease management
  - Demonstrates the importance of intelligent systems approach to decision-making in an interesting mix of domains – bioinformatics, health sciences, and infectious diseases
  - A variety of IT-based tools for surveillance and control of both vectors and disease transmission
- This book is ideal for a general science and engineering audience requiring an in-depth exposure to current issues, ideas, methods, and models. The topics discussed serve as a useful reference to clinical experts, health scientists, public health administrators, medical practitioners, senior under graduate and graduate students in

applied mathematics, biology, bio-informatics, epidemiology, medicine, and health sciences.

This book is ideal for a general science and engineering audience requiring an in-depth exposure to current issues, ideas, methods, and models. The topics discussed serve as a useful reference to clinical experts, health scientists, public health administrators, medical practitioners, senior under graduate and graduate students in applied mathematics, biology, bio-informatics, epidemiology, medicine, and health sciences.

## **Users Review**

### **From reader reviews:**

#### **Donna Miller:**

What do you concerning book? It is not important to you? Or just adding material when you really need something to explain what the one you have problem? How about your extra time? Or are you busy man or woman? If you don't have spare time to do others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? Everybody has many questions above. They must answer that question mainly because just their can do in which. It said that about book. Book is familiar on every person. Yes, it is correct. Because start from on kindergarten until university need that Dynamic Models of Infectious Diseases: Volume 1: Vector-Borne Diseases to read.

#### **Carlos Quirk:**

This book untitled Dynamic Models of Infectious Diseases: Volume 1: Vector-Borne Diseases to be one of several books which best seller in this year, here is because when you read this book you can get a lot of benefit on it. You will easily to buy that book in the book retail outlet or you can order it by using online. The publisher in this book sells the e-book too. It makes you more easily to read this book, since you can read this book in your Mobile phone. So there is no reason to you to past this e-book from your list.

#### **Gerald Magee:**

Reading a book can be one of a lot of task that everyone in the world really likes. Do you like reading book thus. There are a lot of reasons why people like it. First reading a book will give you a lot of new details. When you read a publication you will get new information simply because book is one of several ways to share the information or their idea. Second, studying a book will make an individual more imaginative. When you looking at a book especially fiction book the author will bring someone to imagine the story how the character types do it anything. Third, you may share your knowledge to others. When you read this Dynamic Models of Infectious Diseases: Volume 1: Vector-Borne Diseases, it is possible to tells your family, friends and also soon about yours guide. Your knowledge can inspire others, make them reading a guide.

#### **Dorothy Cropper:**

People live in this new day of lifestyle always try to and must have the extra time or they will get large amount of stress from both daily life and work. So , whenever we ask do people have free time, we will say absolutely without a doubt. People is human not really a huge robot. Then we consult again, what kind of

activity have you got when the spare time coming to a person of course your answer will certainly unlimited right. Then do you ever try this one, reading guides. It can be your alternative in spending your spare time, often the book you have read is definitely Dynamic Models of Infectious Diseases: Volume 1: Vector-Borne Diseases.
